Applicant's election of Alzheimer's disease and the compound 1 in Table 1 on page 23 in the reply filed on 9/27/06 is acknowledged. Because applicant did not distinctly and specifically point out any errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17-19, 29, 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaminski.

Kaminski teaches treatment of Alzheimer's disease with a first compound and other compounds (abstract). Pentamidine is disclosed (column 4 line 31).

Claim 32 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Applicants provide no standard by which to determine prophylaxis.

35 U.S.C. 101 reads as follows:

Art Unit: 1616

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 32 is rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. Nowhere in the specification do applicants provide evidence of prevention nor do they provide an experimental regime for determining such.

No claims allowed.
